Subject: Re: V18 Push Notification - small blurb

Hi Franck,

I put this in the doc:

CYC
The UI was improved with search now including filtering by date range
and view counts. On the policy backend, we imported music publisher
information from UMG, giving us a complete license picture of their
catalog. This included the ability to add up split information from
more than one publisher to get to actionable licenses. All of this
information is stored within the label claim. As the license
information is completed, we now have an automated process that exports
a build list to Audible Magic.

PARTNER INGESTION
Our SFTP drop box was extended to accept data only feeds, allowing us to
accept a broad array of information that can help in our licensing
efforts. Previously, the drop box only expected to receive partner
video feeds, and would reject data only feeds.

VIDEO FINGERPRINTING
Built out FP query server from single machine architecture to allow
multiple machines, or greater scale. We also now support dynamic
addressing of lookup requests, allowing us to load balance and test the
reference side of the service. Post release, we will begin daily
increase in percentage of uploads checked against the video fingerprint
service from 5% up to 100%. Finally, we are also releasing updated
versions of the match algorithm and the FP generator binary.

Feel free to make any changes or additions.

dk
